

BBF-010-1022001

Seat No.

P. G. D. H. M. (Sem. II) (CBCS) Examination

June / July - 2021

Operations Research

Faculty Code: 010

Subject Code: 1022001

Time: $2\frac{1}{2}$ Hours] [Total Marks: 70]

Instruction: Attempt any five questions.

- 1 Answer the following questions:
 - (1) What is Operation Research?
 - (2) State the features of O.R.
 - (3) Explain in detail the modeling in O.R.
 - (4) Explain the advantages and limitations of O.R
 - (5) List the properties of LP problems.
 - (6) Explain in detail: General solution methods for O.R. models
 - (7) Discuss about the components of Linear Programming Problem.
- 2 Answer the following questions:

14

14

- (1) What is Linear Programming Problem? Discuss about the basic assumptions in LPP.
- (2) State the standard form of LPP.
- (3) State the structure of trransportation problem.
- (4) What is transportation problem?
- (5) List the types of transportation problems.
- (6) What is assignment problem?
- (7) State any two advantages for solving LPP by simplex method.
- **3** Answer the following questions:

14

- (1) Explain in detail the types of LPP's.
- (2) Explain in detail properties of LP Models.

- 4 Answer the following questions:
 - (1) Explain the steps for formulating LPP's.
 - (2) Formulate the following allocation problem into LPP: A manufacturer produces two types of models M and N each M model requires 4hours, grinding and 2hours for polishing whereas each N model requires 2hours of grinding and 5 hours for polishing. The manufacturer has 2 grinders and 3 polishers. Each grinder works for 40 hrs. a week and each polisher's works for 60 hrs. a week. Profit on an M model is 3RS., and on an N model is 4Rs. whatever is produced in a week sold in the market. How should the manufacturers allocate this production capacity to the two types of models? So that he may make the maximum profit in a week?
- **5** Answer the following questions:
 - (1) Formulate the following problem into LPP: Firm manufacturer 3 products A, B and C. The profits are 3 Rs., 2 Rs. and 4 Rs. respectively. The firm has two machines M1 and M2 below is the required time in minutes for each machine on each product.

Products							
$A \mid B \mid C$							
$\overline{M1}$	4	3	5				
$\overline{M2}$	2	2	4				

Machines M1 and M2 have 2000 and 2500 machine minutes respectively. The firm must manufacture 100A's, 200B's and 50C's but not more than 150A's. Set up an LPP to maximize profit.

- (2) Explain the Simplex method for solving LPP through algorithm.
- 6 Answer the following questions:

(1) Solve the following Transportation problem using Least cost method.

Doctination

		Destination						
		A	В	C	D	Supply		
	1	3	1	7	4	250		
Source	2	2	6	5	9	350		
	3	8	3	3	2	400		
	Demand	200	300	350	150	1000

2

[Contd....

14

14

14

(2) Solve the following Transportation problem using Vogel's approximation method.

	A	B	C	D	Supply
1	3	1	7	4	300
2	2	6	5	9	400
3	8	3	3	2	500
Demand	250	350	400	200	1200

7 Answer the following questions:

14

(1) Solve the following Transportation problem using North-West corner method.

Destination

		A	B	C	D	Supply
	1	21	16	25	13	11
Source	2	17	18	25 14	23	13
	3	32	27	18	41	19
	Demand	6	10	12	15	43

(2) Solve the following Assignment problem and find the minimum cost.

	J_1	J_2	J_3
A	26	23	27
В	23	22	24
C	24	20	23

8 Answer the following questions:

14

(1) Solve the following Assignment problem and find the minimum cost.

	J_1	J_2	J_3	J_4
A	2	3	5	3
В	10	7	13	14
C	3	2	1	10
D	3	5	4	6

(2) Solve the following LPP by Simplex method:

Minimize
$$Z = x_1 - 3x_2 + 3x_3$$

Subject to

$$3x_1 - x_2 + 2x_3 \le 7$$

$$2x_1 + 4x_2 \ge -12$$

$$-4x_1 + 3x_2 + 8x_3 \le 10$$

and

$$x_1, x_2, x_3 \ge 0$$
.

9 Answer the following questions:

- 14
- 1 Solve the following LPP by simplex method Maximize $Z = 3x_1 + 2x_2$ Subject to

$$r_1 + r_2 < 40$$

$$x_1 + x_2 \le 40$$

$$x_1 - x_2 \le 20$$

and

$$x_1, x_2 \ge 0.$$

(2) Solve the following LP problem by Graphical method. Maximize $Z = 5x_1 + 3x_2$

$$3x_1 + 5x_2 \le 15$$

$$5x_1 + 2x_2 \le 10$$

And

$$x_1, x_2 \ge 0$$
.

10 Answer the following questions: 14

- A company manufactures two types of boxes, corrugated (1) and ordinary cartons. The boxes undergo two major processes: cutting and pinning operations. The profits per unit are Rs. 6 and Rs. 4 respectively. Each corrugated box requires 2 minutes for cutting and 3 minutes for pinning operation, whereas each carton box requires 2 minutes for cutting and 1 minute for pinning. The available operating time is 120 minutes and 60 minutes for cutting and pinning machines. Determine the optimum quantities of the two boxes to maximize the profits using graphical method. Discuss diagnosis of poision.
- A new automobile vehicle costs Rs. 10000 and it can be sold at the end of any year with the selling price as shown. The operating and maintenance cost table. Find when the automobile vehicle needs to be replacing because of wear and tear.

Year	1	2	3	4	5	6
Scrap value	7000	5000	3000	2000	1000	500
Maintenance cost	1000	1600	1800	2500	3000	3500
